MANUFACTURER · ESTABLISHED 1974

ABOUT DENER

Dener Makina was established in 1974 in the Kayseri Old Industrial Zone. Since 2000, the company has focused on the production of CNC Sheet Metal Processing Machines, manufacturing a wide range of products including Guillotine Shears, Hydraulic Press Brakes, Ball Screw Press Brakes, Servo-Electric Press Brakes, Plasma Cutting Machines, and Fiber Laser Cutting Machines.

In 2016, the company made a major investment by expanding its facilities to include 1,670,000 sq ft (155,000 m^2) of factory buildings and 290,000 sq ft (27,000 m^2) of social facilities on a 14,000,000 sq ft (1,300,000 m^2) site within the İncesu Organized Industrial Zone (O.S.B). In this new phase, Dener Makina began the production of CNC Metal Processing Machines such as Taksan Integrated Systems, Double Column Machining Centers, 5-Axis Simultaneous Machining Centers, Vertical Machining Centers, Lathes, and Grinding Machines.

With its extensive production range, over half a century of experience, skilled workforce, and multinational R&D center, Dener Makina holds a leading position globally by providing high-value industrial investment products in the fields of CNC Sheet Metal Processing and CNC Metal Processing Machines.

INCLUDED WITH EVERY NOVOTECH MACHINE

- Made in Turkey with European components
- CSA-approved electrical panel
- 1-year warranty
- **7-day money-back guarantee** (in-stock machines only)
- Spare parts & technical support readily available in Canada
- **Order Today with Just 10% Down — 0% Down Financing Available**
- **Installation and training available**

GFL SERIES

GFL SERIES — DESIGN ADVANTAGES

GFL with the front door open: cutting area and swivelling control unit

Through optic technology, DENER Fiber Laser Machine is able to achieve high-speed performance while cutting 2D sheet metal. Equipped with various cutting modes and well-known fiber laser sources, Dener fiber laser can easily cut challenging parts. A well-thought-out design allows easy transport and installation with a machine equipped with a user-friendly interface. Speed achieved on X, Y, and Z axes is significantly satisfying and allows fast return on investment combined with cutting precision.

Dener body frame was designed and manufactured regarding user needs. With a stress-relief robust body structure and a bridge designed with space geometry, the machine is ready to encounter high acceleration.

Six aspiration pneumatic compartments are also available on this model to facilitate the suction of polluted fume resulting from cutting. Small parts that fall during the cutting process can be found in one of the six scrap boxes mounted on suitable wheels that are easy to remove. The machine is adapted to work with an aspiration system that can collect all the fume resulting from the cutting process.

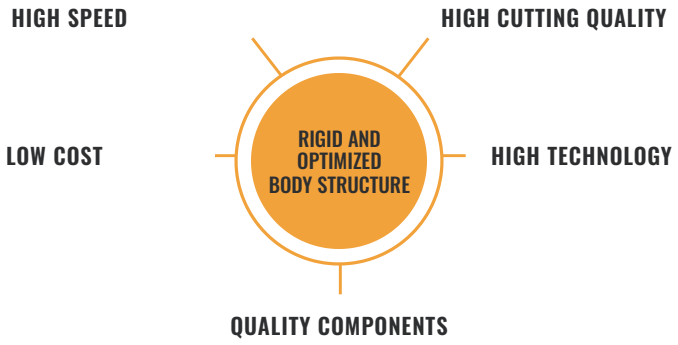

From choosing high quality steel, followed by a welding art, the frame passes through stress relief process. The remaining machining of the parts is made on very precise 5 axis portal milling boring machine. The obtained final frame is rigid, ergonomic and highly resistant to high speed displacements of the bridge.

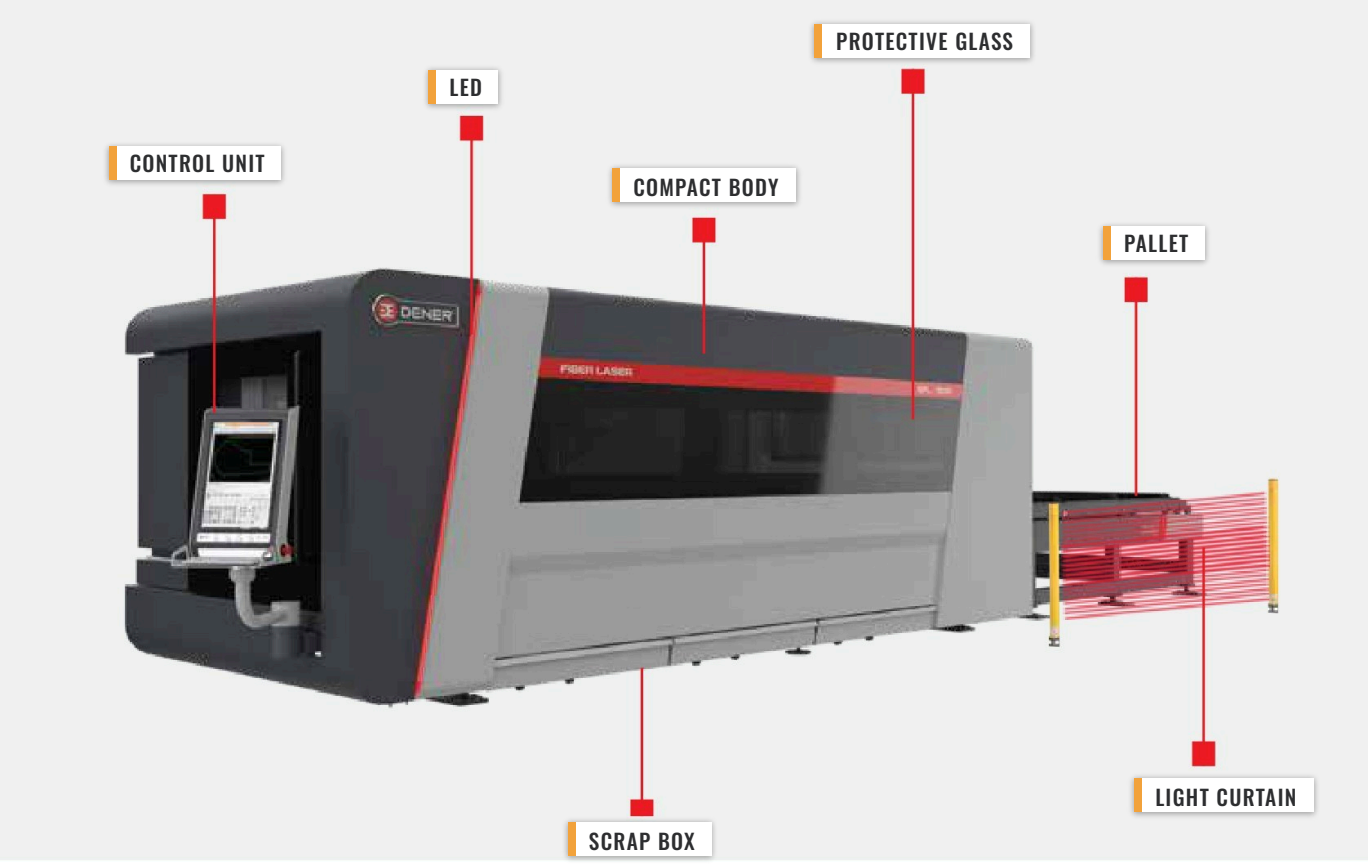

GFL FIBER LASER CUTTING MACHINE

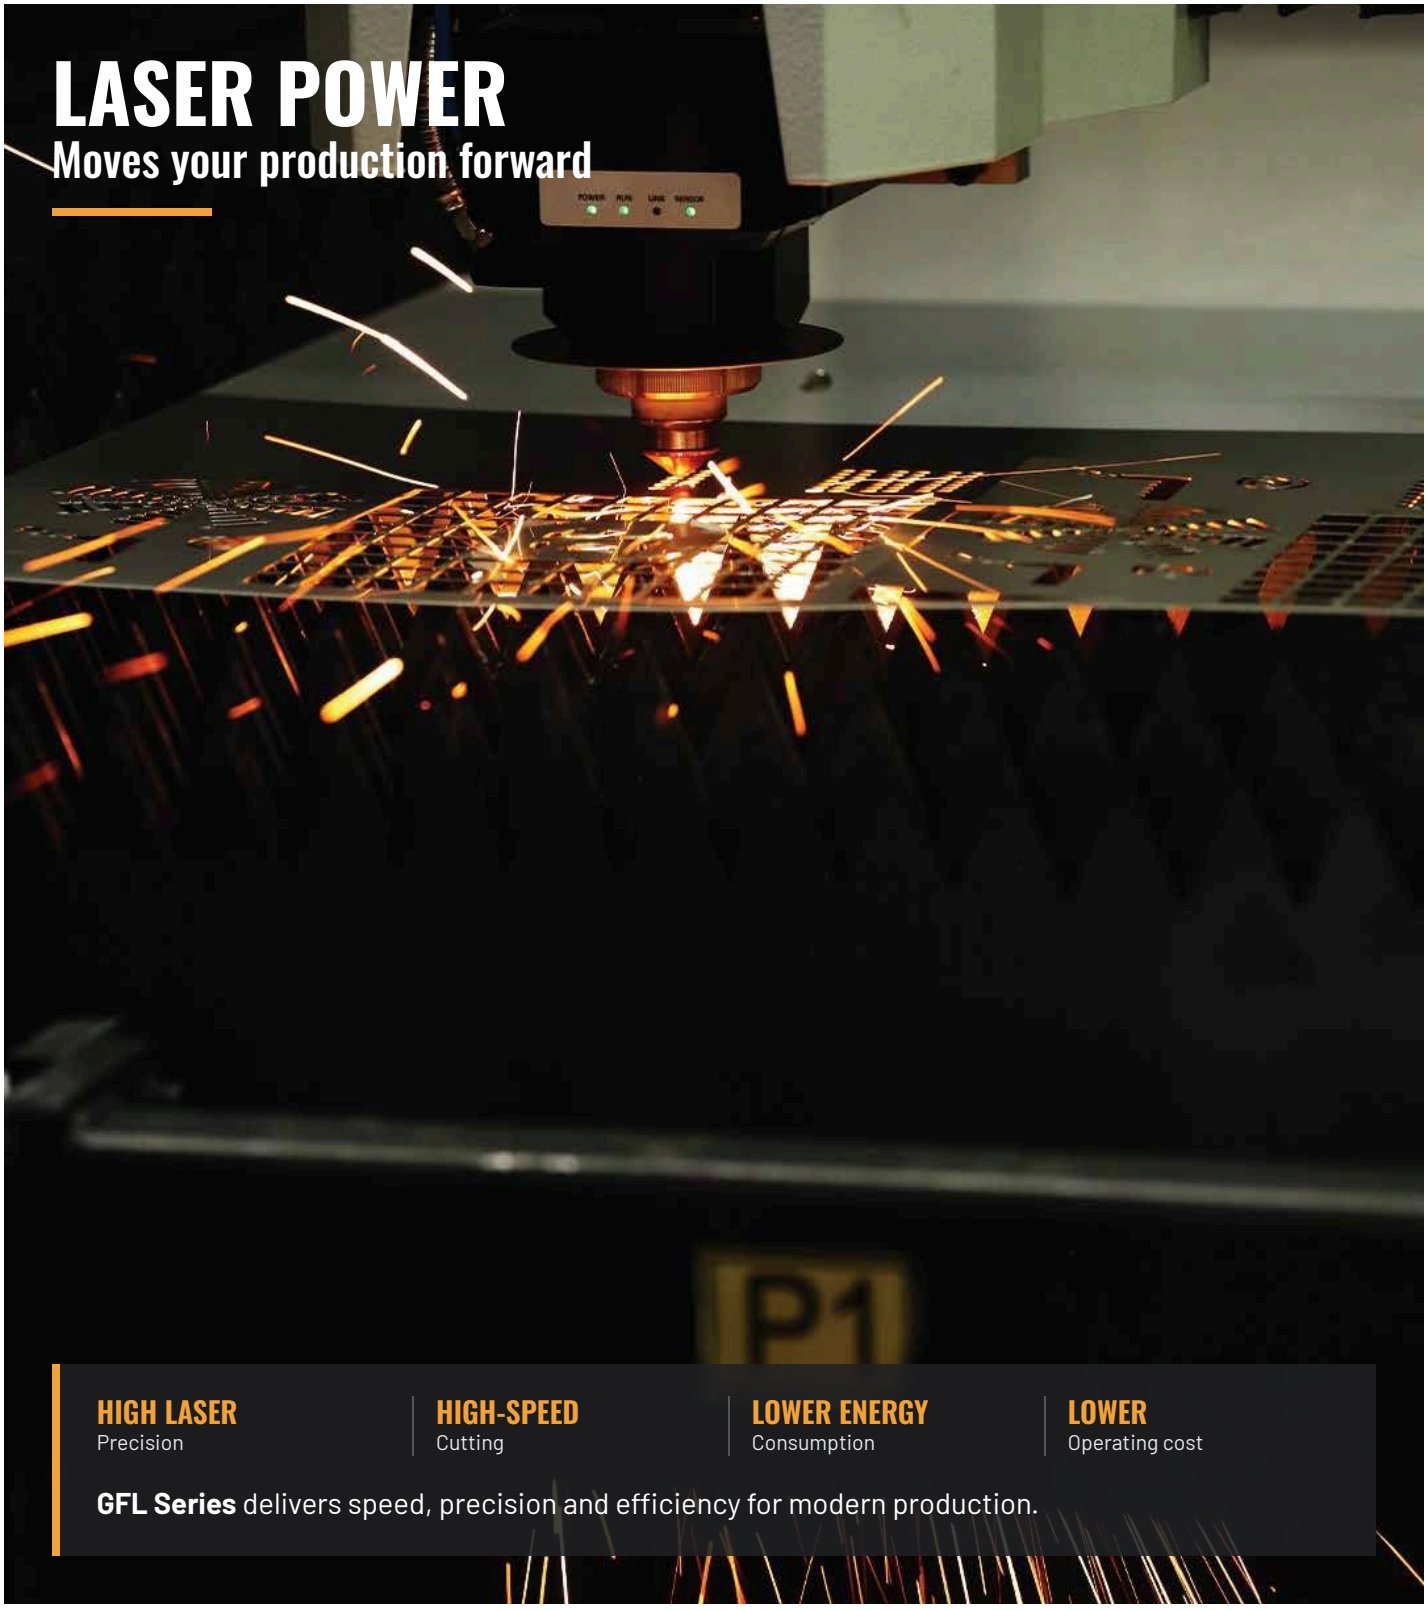

GFL FIBER LASER CUTTING MACHINE

DIFFERENTIATING FEATURES

- Advanced hardware, best in class
- Advanced remote access and ease of control
- High security and easy maintenance
- Ease of use with Windows-based operating system

LOWER ENERGY
Consumption

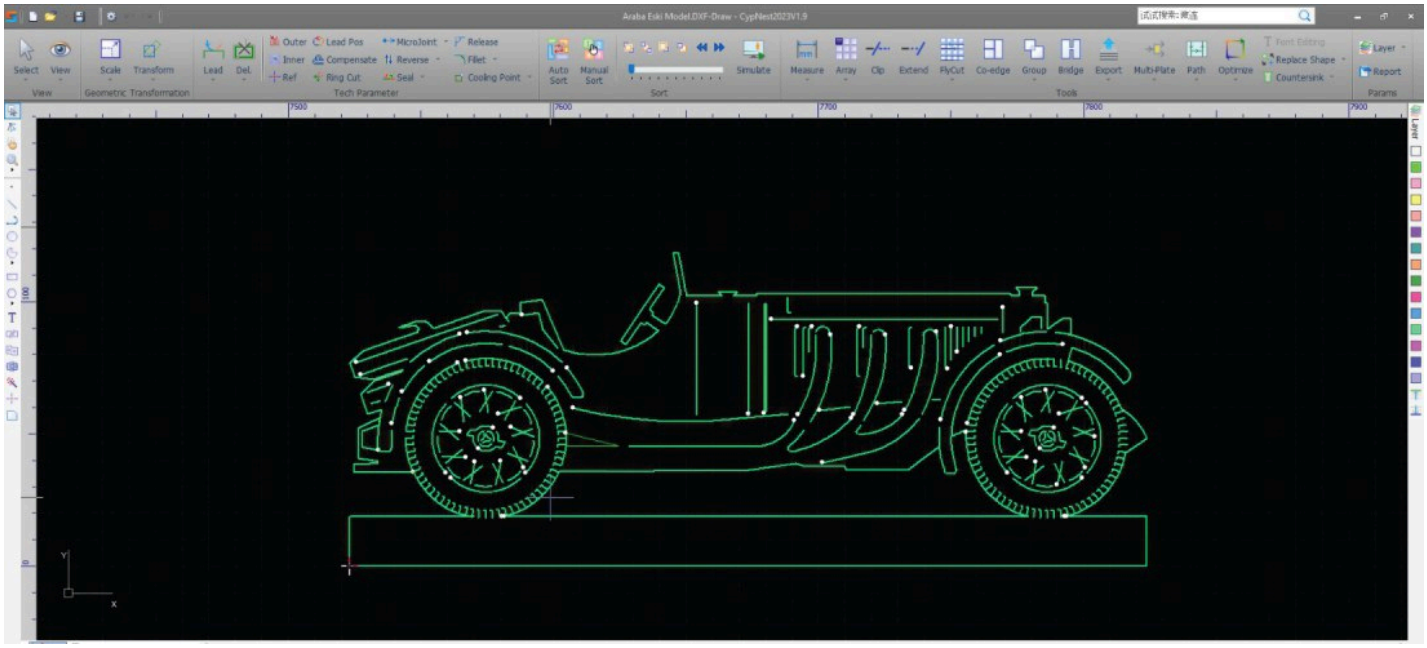

LOWER
Operating cost

GFL Series delivers speed, precision and efficiency for modern production.

SMART SOFTWARE

CYPNEST NESTING SOLUTION

CypNest is a nesting software for CypCut/HypCut laser cutting systems. It offers advanced features like drawing modification, quick nesting, and toolpath optimization. It supports DWG, DXF files, and Excel-based batch import. The powerful algorithm enables efficient manual or automatic nesting, with smart toolpath strategies to minimize travel. CypNest also generates production and pricing reports, perfectly integrating with HypCut/CypCut software.

CypNest nesting software

SPEED UP PRODUCTION

- Drawing Modification and intelligent part recognition
- Supports DWG and DXF formats. Excel table-based part creation and import support.
- Nesting Strategy: Powerful algorithm for high efficiency and fast production rate
- No part quantity limitation, supports manual and automatic nesting, and free-form sheet placement
- Toolpath Optimization: Smart cutting path strategy to minimize travel length
- Smooth operation with toolpath adjustment options and multiple contact settings
- Generates production and pricing analysis reports. Technical and cutting parameters perfectly match HypCut/CypCut laser cutting software.

BLT SERIES SMART CUTTER · CLOSED-LOOP AUTOFOCUS

LASER CUTTING HEAD

Focusing on 2D, 3D and angle cutting, the cost-effective BLT Series Smart Cutter is available for power levels below 30 kW and offers excellent performance with stable cutting, easy installation and setup. Brand new optical solutions are available with closed-loop autofocus.

Slag-free cutting, nozzle cooling and water cooling sensor can be supported. Makes cutting more stable and efficient. Smart Drilling and Auto Re-cutting functions meet the most demanding air standard and N2 high-performance cutting, significantly increasing efficiency and productivity.

STABLE AND EFFICIENT CUTTING PROCESS

LED INDICATORS

LEDs on the laser head; communication. The sensors provide information that the power is working correctly.

> Equipped with advanced technology, it offers a cutting solution that combines high performance with affordable costs.

BLT cutting head — LED indicators: power, run, link and sensor

Ready-to-use optical drawers

EASY INSTALLATION AND LOW REPAIR COSTS

Lens change in 2 minutes with ready-to-use optical drawers.

LASER RESONATOR · CHILLER · LIGHT CURTAIN · RACK AND PINION

EQUIPMENT

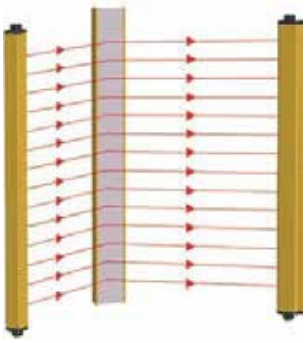

Laser resonator

It offers high electro-optical conversion efficiency, excellent beam quality, and high energy density. With a wide modulation frequency range, strong reliability, long service life, and maintenance-free operation, it delivers stable and efficient laser performance.

Chiller

The chiller continuously communicates with the CNC control unit to maintain the optimal operating temperature for the laser source and cutting head. This improves process stability, protects critical components, and supports consistent cutting quality during long production cycles.

Light curtain

The light curtain is designed to ensure operator safety during pallet change operations. It detects any intrusion into the protected area and immediately triggers the necessary safety response, helping prevent accidents and ensuring safe machine operation.

Rack and pinion system

The rack and pinion system enhances positioning accuracy while providing ease of assembly, reduced wear, and long service life. Thanks to this component, movement across various axes is achieved with a positioning tolerance of ±0.002" (±0.05 mm), ensuring stable and precise axis motion performance.

Z AXIS · WELDED FRAME · CUTTING TABLES · SCRAP BOXES

EQUIPMENT

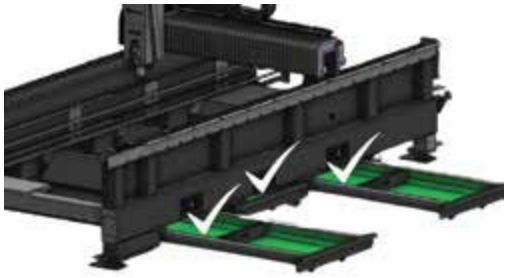

Performant Z axis

The Dener fiber laser Z axis is designed and configured to reach a speed of 1G. The Z axis can handle high acceleration while maintaining cutting accuracy. Ahead of its competitors, the Z axis on the GFL model has a stroke length of 13.8" (350 mm).

Compact welded frame

From choosing high-quality steel, followed by the art of welding, the frame passes through a stress-relief process. The remaining machining of the parts is carried out on a highly precise 5-axis portal milling and boring machine. The obtained final frame is rigid, ergonomic, and highly resistant to high-speed displacements of the bridge.

Cutting tables

The shuttle table system consists of two moving tables. While the cutting process continues on the table inside the machine, the other table can be used to load sheets or collect processed parts.

Scrap boxes

With an ergonomic design, scrap boxes are easy to pull and small parts and scrap can be easily reached. Optionally, a CNC-controlled conveyor can be included.

OPERATOR COMFORT AND SAFETY

EASE OF USE & SECURITY

EASE OF USE

HANDWHEEL

The machine has a handwheel for precise axis movement adjustments. It is especially useful when precise positioning is required to make small cuts from the remaining parts of metal sheets that have been previously used for cutting.

RESUME CUTTING AFTER AN ALARM

When the machine is stopped or paused for any reason, cutting can be started again from the desired point.

SECURITY

PROTECTING THE CUTTING HEAD

If the cutting head is very close to hitting a piece or pallet, the machine stops immediately to prevent damage. After the machine stops, the operator can check and resolve the issue, then press the start button to resume cutting from where it left off.

PROTECTIVE GLASSES

In order to prevent damage to the eyes caused by the fiber laser light, there are viewing glasses on the front doors of the machine suitable for the fiber laser wavelength.

EMERGENCY STOPS

An easy access to emergency stop button provides a safe working environment to the operator. A buzzer found on top of the machine shows in real time the working state of the machine.

SAFETY BARRIERS

Light safety barriers stop the pallet change process if breached, preventing injury. After a reset, the pallet change can be resumed in the desired direction.

DENER MAKINA · SERVICE, PARTS AND R&D

SERVICE & SUPPORT

FAST SERVICE AND SPARE PART DELIVERY

Dener Makina responds to service requests as quickly as possible to ensure production continuity. All service and parts needs received from our customers are systematically evaluated and processed by our experienced customer representatives. From the moment a malfunction is reported, the response process is meticulously managed. Our field teams are quickly deployed, minimizing production interruptions.

Our spare parts inventory management is fully aligned with our machinery. By constantly maintaining critical parts in stock, we offer our customers fast and reliable parts supply. This prevents time loss during service interventions and ensures the uninterrupted operation of your machines.

R&D SERVICE BACKUP

Dener Makina's R&D center actively works to develop service solutions tailored to customer needs. Based on feedback from field experience, existing machines are updated with software and hardware, and new functions are integrated. This allows the machines to easily adapt to changing production needs.

Technical requirements, particularly those encountered in production for specific processes and sectors, are analyzed by our engineering departments and solution-focused projects are developed.

This allows user-specific machines to be optimized for high efficiency. This R&D-supported approach is key to Dener's success.

REMOTE AND DIGITAL SUPPORT

Thanks to our remote access system integrated into our digital infrastructure, our machines can be accessed from anywhere in the world. This system allows software updates, error analysis, and setting checks to be performed instantly. In cases where urgent technical support is required, rapid solutions are provided before physical intervention, resulting in time and cost savings.

Our remote access support service is designed to be compatible with all our machine models. Being available to our customers whenever they need it is the cornerstone of our service approach. This digital support system increases efficiency, minimizes downtime, and ensures uninterrupted production.
